

- All Rapid Fix installations can be combined with a safe lock mechanism which meets European Machine Directive 98/37 as well as with the EN-1088 and the EN-954-1, the latter defining five specific categories of safety levels; B, plus 1 to 4

Rapid Fix Machine Protective Fencing

- Rapid Fix Machine Guarding is a flexible machine protection system that simplifies servicing, repairs and rebuilding
- It allows considerable reduction in the downtime associated with removal of conventional guarding systems
- Rapid Fix saves floor space and is fast to assemble and dismantle
- It allows the machine protection to be placed closer to machines and conveyors
- Complies to current standards for machine safety such as EN-953 and EN-292
- Panels are tested for both static and dynamic loadings
- On site surveys are available together with full CAD design facilities. Please contact our sales department for your requirements

This installation shows Rapid Fix as a special project using perspex panels, whilst still combining all the advantages of the system

Guidance Notes

- The figures quoted below are for budget purposes only and can be used to generate an approximate cost for your proposed scheme based on standard stock items
- For individual, specialised requirements we suggest you take advantage of our site survey, specification and quotation service to determine more precise costs

Description	Height (mm)	Code	Price Per Linear Metre
